

FOR THE RECORD

Private reflection for
wallet decisions on Seeker

For the record, this is why I did it.

The missing reason

A transaction history keeps the event.
The explanation can be harder to find later.

For Seeker users who want to reflect on their swaps,
a record needs the original reason and a later review.

FOR THE RECORD attaches personal writing to a supported
transaction and preserves the first saved explanation.

Decision Replay

01 One reason is enough

Choose supported activity and save your reason.
The other writing prompts are optional.

02 A specific moment to revisit

Choose 1, 3 or 7 days. Reopen the first note,
add a reflection, and keep a lesson with its source.

The app shows due records on its home screen.

← Trade journal

USDC → wSOL

The on-chain facts stay unchanged.

1 / 4

Why did you make this trade?

One reason is enough to save. The rest is optional.

Put your thoughts into words...

Solana context, private writing

Native Mobile Wallet Adapter

The connected account anchors a public activity read.
The journal requests no transaction signature.

Personal writing stays on the device

SQLite keeps the original reason, later review and lesson.
The AI receives bounded note text locally.

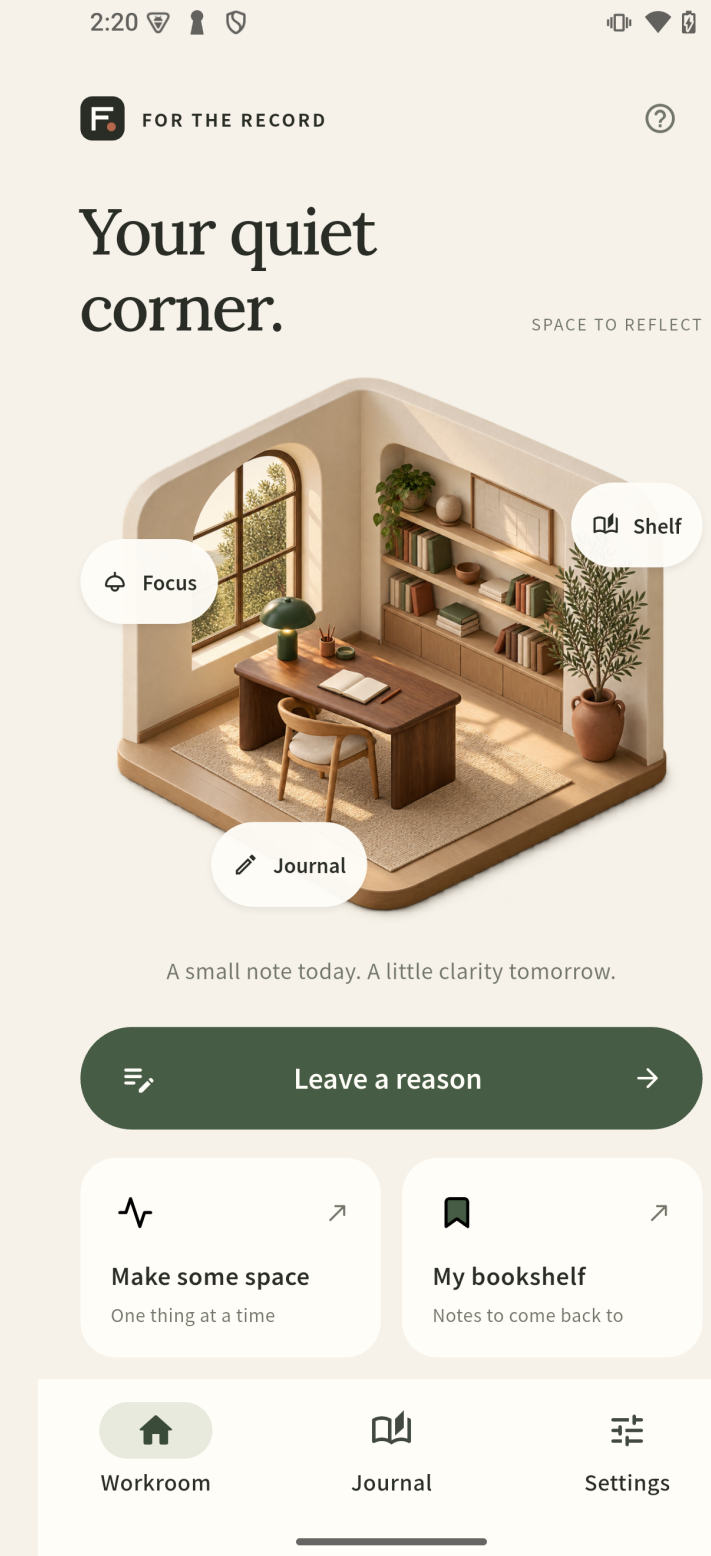

Current parser: selected finalized Jupiter v6 swaps with classic SPL tokens. Other activity stays unsupported.

A room worth returning to

A skippable guide introduces the room.
The lamp begins a focus session.
A saved next action starts the next visit.

The same reflection habit works
for building, learning and wallet decisions.

Eight UI languages. Optional reduced motion.
Work notes remain available offline.

Measured on Seeker

93

app tests passed

26 / 30

first AI suggestions matched
in the additional EN / KO synthetic set

Offline AI, cancellation and reuse passed.
The release APK installed and displayed AI questions.

Small authored evaluation on one device. Live supported swap-to-journal completion and user retention remain unverified.

Your decisions, with their reasons

A private journal for a reflection habit on Seeker.

Next: a consented pilot measuring first saved reasons, completed revisits and second-week return.
